Varying the sufficient-decrease parameter α ($\beta = 0.7$)
(a) Objective value
After the first update
Objective value $f(x^{(k)})$
Update index k
$f^\star = 2.559267$
(b) Suboptimality on a logarithmic scale
Objective gap $f(x^{(k)}) - f^\star$
Update index k
$\alpha = 0.01$ (202 updates)
$\alpha = 0.1$ (36 updates)
$\alpha = 0.3$ (32 updates)
